

LIST OF CONTENTS

NUMBER 1

- | | | |
|---|-----|--|
| C. Pozrikidis | 1 | Boundary conditions for shear flow past a permeable interface modeled as an array of cylinders |
| G. C. Hocking and L. K. Forbes | 19 | The lens of freshwater in a tropical island—2d withdrawal |
| N. Črnjarić-Žić, S. Vuković and L. Sopta | 31 | Extension of ENO and WENO schemes to one-dimensional sediment transport equations |
| R. Jia and B. Sundén | 57 | Parallelization of a multi-blocked CFD code via three strategies for fluid flow and heat transfer analysis |
| D.-H. Kim, K.-S. Yang and M. Senda | 81 | Large eddy simulation of turbulent flow past a square cylinder confined in a channel |
| J.-Y. Hwang and K.-S. Yang | 97 | Numerical study of Taylor–Couette flow with an axial flow |
| Y. Zhao | 119 | Computation of complex turbulent flow using matrix-free implicit dual time-stepping scheme and LRN turbulence model on unstructured grids |
| H. Ding, C. Shu, K. S. Yeo and D. Xu | 137 | Development of least-square-based two-dimensional finite-difference schemes and their application to simulate natural convection in a cavity |

NUMBER 2

- | | | |
|--|-----|---|
| A. Kourta | 155 | Instability of channel flow with fluid injection and parietal vortex shedding |
| L. Belhoucine, M. Deville, A. R. Elazehari and M. O. Bensalah | 179 | Explicit algebraic Reynolds stress model of incompressible turbulent flow in rotating square duct |
| D. G. E. Grigoriadis, J. G. Bartzis and A. Goulas | 201 | Efficient treatment of complex geometries for large eddy simulations of turbulent flows |
| J.-G. Liu and C. Wang | 223 | High order finite difference methods for unsteady incompressible flows in multi-connected domains |
| S. Bhattacharyya and F. T. Smith | 257 | Comparisons of direct simulations and analytical predictions for multi-plate flows |
| P. G. Tucker and L. Davidson | 267 | Zonal $k-l$ based large eddy simulations |
| D. Adechy and R. I. Issa | 289 | Modelling of annular flow through pipes and T-junctions |

- | | | |
|----------------------|-----|---|
| J. G. Wissink | 315 | On unconditional conservation of kinetic energy by finite-difference discretizations of the linear and non-linear convection equation |
|----------------------|-----|---|

NUMBER 3

- | | | |
|--|-----|--|
| D. V. Gaitonde | 345 | A high-order implicit procedure for the 3-D electric field in complex magnetogasdynamics simulations |
| E. Balaras | 375 | Modeling complex boundaries using an external force field on fixed Cartesian grids in large-eddy simulations |
| W. W. Huebsch and
A. P. Rothmayer | 405 | Numerical prediction of unsteady vortex shedding for large leading-edge roughness |
| M. Manhart | 435 | A zonal grid algorithm for DNS of turbulent boundary layers |
| R. Fernandez-Feria and
E. Sanmiguel-Rojas | 463 | An explicit projection method for solving incompressible flows driven by a pressure difference |
| D. Wilhelm and E. Meiburg | 485 | Three-dimensional spectral element simulations of variable density and viscosity, miscible displacements in a capillary tube |

NUMBER 4

- | | | |
|--|-----|--|
| Z. Yin, H. J. H. Clercx and
D. C. Montgomery | 509 | An easily implemented task-based parallel scheme for the Fourier pseudospectral solver applied to 2D Navier-Stokes turbulence |
| S. D. Müller, I. Mezić,
J. H. Walther and
P. Koumoutsakos | 521 | Transverse momentum micromixer optimization with evolution strategies |
| M. Tezer-Sezgin | 533 | Solution of magnetohydrodynamic flow in a rectangular duct by differential quadrature method |
| N. Lardjane, I. Fedioun and
I. Gökalp | 549 | Accurate initial conditions for the direct numerical simulation of temporal compressible binary shear layers with high density ratio |
| P. W. Longest, C. Kleinstreuer
and J. R. Buchanan | 577 | Efficient computation of micro-particle dynamics including wall effects |
| X. Cui | 603 | Numerical simulations of the generation of Taylor-Görtler vortices during spin-down to rest in finite-length cylinders |
| A. Mezrhab, M. Bouzidi and
P. Lallemand | 623 | Hybrid lattice-Boltzmann finite-difference simulation of convective flows |

- | | | |
|--|------------|--|
| L. Klinger, J. B. Vos and K. Appert | 643 | A simplified gradient evaluation on non-orthogonal meshes; application to a plasma torch simulation method |
| H. Guillard and A. Murrone | 655 | On the behavior of upwind schemes in the low Mach number limit: II. Godunov type schemes |

NUMBERS 5-6

Special Issue

Applied Mathematics for Industrial Flow Problems

Guest Editors

M. Deville and T. A. Kowalewski

- | | | |
|---|------------|--|
| M. Deville and T. A. Kowalewski | 677 | Editorial |
| C. Berthon and D. Reigner | 679 | Nonlinear projection methods to approximate combustion turbulent flows |
| C. Chauvière and A. Lozinski | 687 | Simulation of dilute polymer solutions using a Fokker-Planck equation |
| G.-H. Cottet and P. Poncet | 697 | Simulation and control of three-dimensional wakes |
| Y. Ding, T. Ha-Duong, J. Giroire and V. Moumas | 715 | Modelling of single-phase flow for horizontal wells in a stratified medium |
| J. Halama, T. Arts and J. Fořt | 729 | Numerical solution of steady and unsteady transonic flow in turbine cascades and stages |
| S. Hein and V. Theofilis | 741 | On instability characteristics of isolated vortices and models of trailing-vortex systems |
| J. C. C. Henriques and L. M. C. Gato | 755 | A multi-dimensional upwind matrix distribution scheme for conservative laws |
| G. Houzeaux and R. Codina | 771 | A Dirichlet/Neumann domain decomposition method for incompressible turbulent flows on overlapping subdomains |
| T. Iliescu and P. Fischer | 783 | Backscatter in the rational LES model |
| M. Kessler and S. Wagner | 791 | Source-time dominant aeroacoustics |
| J.-F. Gerbeau, T. Lelièvre and C. Le Bris | 801 | Modeling and simulation of the industrial production of aluminium: the nonlinear approach |
| T. Lelièvre | 815 | Optimal error estimate for the CONNFESSIT approach in a simple case |
| A. C. Lemos, M. J. Baines and N. K. Nichols | 821 | Upwind solution of singular differential equations arising from steady channel flows |

V. Martin	829	An optimized Schwarz waveform relaxation method for the unsteady convection diffusion equation in two dimensions
C. Michler, S. J. Hulshoff, E. H. van Brummelen and R. de Borst	839	A monolithic approach to fluid-structure interaction
F. Muyl, L. Dumas and V. Herbert	849	Hybrid method for aerodynamic shape optimization in automotive industry
J. Smolka, A. J. Nowak and L. C. Wrobel	859	Numerical modelling of thermal processes in an electrical transformer dipped into polymerised resin by using commercial CFD package fluent
K.-H. Sun, D. L. Pyle, A. D. Fitt, C. P. Please, M. J. Baines and N. Hall-Taylor	869	Numerical study of 2D heat transfer in a scraped surface heat exchanger
M. A. Wakefield, M. J. Baines and D. Porter	881	Bounds on physical quantities

NUMBER 7

A. Schouwenburg	889	Editorial
L. P. Zhang and Z. J. Wang	891	A block LU-SGS implicit dual time-stepping algorithm for hybrid dynamic meshes
T. Ye, W. Shyy, C.-F. Tai and J. N. Chung	917	Assessment of sharp- and continuous-interface methods for drop in static equilibrium
T. K. Sengupta, V. Chaturvedi, P. Kumar and S. De	927	Computation of leading-edge contamination
Z. Jiang, Y. Huang and K. Takayama	953	Shocked flows induced by supersonic projectiles moving in tubes
Z.-H. Li and H.-X. Zhang	967	Gas kinetic algorithm using Boltzmann model equation
	993	Announcement

NUMBER 8

F. Payri, J. Benajes, X. Margot and A. Gil	995	CFD modeling of the in-cylinder flow in direct-injection Diesel engines
N. Okong'o and J. Bellan	1023	Perturbation and initial Reynolds number effects on transition attainment of supercritical, binary, temporal mixing layers
M.-J. Lai and P. Wenston	1047	Bivariate splines for fluid flows

- S. H. Momeni-Masuleh and T. N. Phillips** 1075 Viscoelastic flow in an undulating tube using spectral methods
- 1097 **Announcement:** ICOSAR'05
- 1099 **Announcement:** MATHEMATICAL AND NUMERICAL ASPECTS OF LOW MACH NUMBER FLOWS

NUMBER 9

- S. Camarri, M. V. Salvetti, B. Koobus and A. Dervieux** 1101 A low-diffusion MUSCL scheme for LES on unstructured grids
- E. J. Nielsen, J. Lu, M. A. Park and D. L. Darmofal** 1131 An implicit, exact dual adjoint solution method for turbulent flows on unstructured grids
- Y.-J. Jan and T. W.-H. Sheu** 1157 A numerical confirmation of the dual body vortex flowmeter design
- S. Peigin and B. Epstein** 1175 Robust optimization of 2D airfoils driven by full Navier-Stokes computations
- B. He, M. Chen, Q. Yu, S. Liu, L. Fan, S. Sun, J. Xu and W.-P. Pan** 1201 Numerical study of the optimum counter-flow mode of air jets in a large utility furnace
- M. R. Ruith, P. Chen and E. Meiburg** 1225 Development of boundary conditions for direct numerical simulations of three-dimensional vortex breakdown phenomena in semi-infinite domains

NUMBER 10

- X. Chen, B. S. McLaury and S. A. Shirazi** 1251 Application and experimental validation of a computational fluid dynamics (CFD)-based erosion prediction model in elbows and plugged tees
- S. Vincent, J.-P. Caltagirone, P. Lubin and T. N. Randrianarivelo** 1273 An adaptive augmented Lagrangian method for three-dimensional multimaterial flows
- A. G. Malan and R. W. Lewis** 1291 On the development of high-performance C++ object-oriented code with application to an explicit edge-based fluid dynamics scheme
- S. Perron, S. Boivin and J.-M. Hérard** 1305 A finite volume method to solve the 3D Navier-Stokes equations on unstructured collocated meshes
- E. M. Alawadhi** 1335 Phase change process with free convection in a circular enclosure: numerical simulations

**Y. Guo, A. T. Hsu, J. Wu,
Z. Yang and A. Oyediran**

1349 Extension of CE/SE method to 2D viscous flows

C. Sun and A. Hsu

1363 Multi-level lattice Boltzmann model on square
lattice for compressible flows
